

Name:

Proposed title for your project (this should reflect a research focus and be clear to your reader):

1. Article Review

Complete one of these for each article reviewed. Information should be summarized succinctly but sufficiently (do not copy and paste from the articles). The goal is not to duplicate the article, but to summarize it sufficiently. Every blank must be answered except the optional comments box, and complete, grammatically correct, sentences should be used. It is not necessary to include a citation for the information in the template as the reference box serves this purpose.

Article 1
Complete reference (in APA)
What was the answer to the researchers' " what " question (what is their research question and focus)?
What was the answer to the researchers' " why " question (what was the gap they found or reason they stated for conducting their research)?
Give a brief summary of the subjects/participants in their study to include general demographics and sampling procedures. Include their sample size and any rationale for this. (You should not include excessive or irrelevant details here).
Give a general overview of their methodology . This should include their measures and instruments used, and any helpful details you might need to understand their research. (Give sufficient details but do not repeat entire methods section.)
Give a brief summary of results/discussion/conclusion from the article. (Summarize what the research indicated, and other important details from the article.)
What strengths of the research and design did you notice?
What weaknesses of the research and design did you notice?
How does this article help in the development of your proposal ? How might you use this in the background to you study? (Be sure to specifically connect the article to your project here.)

Other comments or important notations (optional – for your benefit)

Article 2
Complete reference (in APA)
What was the answer to the researchers’ “ what ” question (what is their research question and focus)?
What was the answer to the researchers “ why ” question (what was the gap they found or reason they stated for conducting their research)?
Give a brief summary of the subjects/participants in their study to include general demographics and sampling procedures. Include their sample size and any rationale for this. (You should not include excessive or irrelevant details here).
Give a general overview of their methodology . This should include their measures and instruments used, and any helpful details you might need to understand their research. (Give sufficient details but do not repeat entire methods section.)
Give a brief summary of results/discussion/conclusion from the article. (Summarize what the research indicated, and other important details from the article.)
What strengths of the research and design did you notice?
What weaknesses of the research and design did you notice?
How does this article help in the development of your proposal ? How might you use this in the background to you study? (Be sure to specifically connect the article to your project here.)
Other comments or important notations (optional – for your benefit)

Article 3
Complete reference (in APA)
What was the answer to the researchers’ “ what ” question (what is their research question and focus)?

What was the answer to the researchers “ why ” question (what was the gap they found or reason they stated for conducting their research)?
Give a brief summary of the subjects/participants in their study to include general demographics and sampling procedures. Include their sample size and any rationale for this. (You should not include excessive or irrelevant details here).
Give a general overview of their methodology . This should include their measures and instruments used, and any helpful details you might need to understand their research. (Give sufficient details but do not repeat entire methods section.)
Give a brief summary of results/discussion/conclusion from the article. (Summarize what the research indicated, and other important details from the article.)
What strengths of the research and design did you notice?
What weaknesses of the research and design did you notice?
How does this article help in the development of your proposal ? How might you use this in the background to you study? (Be sure to specifically connect the article to your project here.)
Other comments or important notations (optional – for your benefit)

Article 4
Complete reference (in APA)
What was the answer to the researchers’ “ what ” question (what is their research question and focus)?
What was the answer to the researchers “ why ” question (what was the gap they found or reason they stated for conducting their research)?
Give a brief summary of the subjects/participants in their study to include general demographics and sampling procedures. Include their sample size and any rationale for this. (You should not include excessive or irrelevant details here).

Give a general overview of their **methodology**. This should include their measures and instruments used, and any helpful details you might need to understand their research. (Give sufficient details but do not repeat entire methods section.)

Give a brief summary of **results/discussion/conclusion** from the article. (Summarize what the research indicated, and other important details from the article.)

What **strengths** of the research and design did you notice?

What **weaknesses** of the research and design did you notice?

How does this article help in the development of **your proposal**? How might you use this in the background to your study? (Be sure to specifically connect the article to your project here.)

Other comments or important notations (optional – for your benefit)

Article 5

Complete reference (in APA)

What was the answer to the researchers' "**what**" question (what is their research question and focus)?

What was the answer to the researchers' "**why**" question (what was the gap they found or reason they stated for conducting their research)?

Give a brief summary of the **subjects/participants** in their study to include general demographics and sampling procedures. Include their sample size and any rationale for this. (You should not include excessive or irrelevant details here).

Give a general overview of their **methodology**. This should include their measures and instruments used, and any helpful details you might need to understand their research. (Give sufficient details but do not repeat entire methods section.)

Give a brief summary of **results/discussion/conclusion** from the article. (Summarize what the research indicated, and other important details from the article.)

What **strengths** of the research and design did you notice?

What weaknesses of the research and design did you notice?
How does this article help in the development of your proposal ? How might you use this in the background to you study? (Be sure to specifically connect the article to your project here.)
Other comments or important notations (optional – for your benefit)

Article 6
Complete reference (in APA)
What was the answer to the researchers’ “ what ” question (what is their research question and focus)?
What was the answer to the researchers “ why ” question (what was the gap they found or reason they stated for conducting their research)?
Give a brief summary of the subjects/participants in their study to include general demographics and sampling procedures. Include their sample size and any rationale for this. (You should not include excessive or irrelevant details here).
Give a general overview of their methodology . This should include their measures and instruments used, and any helpful details you might need to understand their research. (Give sufficient details but do not repeat entire methods section.)
Give a brief summary of results/discussion/conclusion from the article. (Summarize what the research indicated, and other important details from the article.)
What strengths of the research and design did you notice?
What weaknesses of the research and design did you notice?
How does this article help in the development of your proposal ? How might you use this in the background to you study? (Be sure to specifically connect the article to your project here.)
Other comments or important notations (optional – for your benefit)

Article 7

Complete reference (in APA)
What was the answer to the researchers' " what " question (what is their research question and focus)?
What was the answer to the researchers " why " question (what was the gap they found or reason they stated for conducting their research)?
Give a brief summary of the subjects/participants in their study to include general demographics and sampling procedures. Include their sample size and any rationale for this. (You should not include excessive or irrelevant details here).
Give a general overview of their methodology . This should include their measures and instruments used, and any helpful details you might need to understand their research. (Give sufficient details but do not repeat entire methods section.)
Give a brief summary of results/discussion/conclusion from the article. (Summarize what the research indicated, and other important details from the article.)
What strengths of the research and design did you notice?
What weaknesses of the research and design did you notice?
How does this article help in the development of your proposal ? How might you use this in the background to your study? (Be sure to specifically connect the article to your project here.)
Other comments or important notations (optional – for your benefit)

Article 8
Complete reference (in APA)
What was the answer to the researchers' " what " question (what is their research question and focus)?
What was the answer to the researchers " why " question (what was the gap they found or reason they stated for conducting their research)?

Give a brief summary of the **subjects/participants** in their study to include general demographics and sampling procedures. Include their sample size and any rationale for this. (You should not include excessive or irrelevant details here).

Give a general overview of their **methodology**. This should include their measures and instruments used, and any helpful details you might need to understand their research. (Give sufficient details but do not repeat entire methods section.)

Give a brief summary of **results/discussion/conclusion** from the article. (Summarize what the research indicated, and other important details from the article.)

What **strengths** of the research and design did you notice?

What **weaknesses** of the research and design did you notice?

How does this article help in the development of **your proposal**? How might you use this in the background to your study? (Be sure to specifically connect the article to your project here.)

Other comments or important notations (optional – for your benefit)

Problem Statement:

[This should be written only after completing the literature review portion of this assignment]

Based on your literature review, write a condensed version of what would be considered an appropriate problem statement for your project. Keep in mind the three important components: What we know (what the literature review has shown us), what we don't know (the gap), and what we want to know (how your research might fill that gap). What did nobody study? What connections did YOU find? What population got ignored? What questions remain unanswered. The problem statement comes from those observations.

Ex: Although [what we know from research], [gap or problem], which is concerning because [why it matters]. This study addresses this problem by [brief preview of what you'll do].

Research Question(s) and Hypothesis(es):

Research Question(s):

Hypothesis(es):
